EXPERIENCE

InyaLand | Backend/Platform Engineer (Contract)

Jan. 2026 – Sept. 2026

IT Consulting & Modernization | Client: Ooredoo Myanmar

- Built a resilient Kubernetes telemetry pipeline with Go and Azure Event Hubs, implementing prioritized resync logic that reduced data loss during network outages by an estimated 20%.
- Designed an AI summarization pipeline with Azure AI Foundry, data pre-aggregation, and gap detection, reducing LLM token usage by approximately 25% while flagging incomplete data.
- Provisioned AKS clusters, node pools, and Azure Cosmos DB with Terraform, configuring autoscaling and node auto-repair to reduce manual intervention by an estimated 15%.
- Contributed to GitHub Actions CI/CD pipelines supporting build, test, and container-scanning workflows for Go-based Kubernetes services across the platform.
- Established local Kubernetes monitoring with Prometheus and Grafana as part of a four-engineer observability team, preserving site-level visibility during network outages while integrating with centralized platform monitoring.

OSAnalytics | Software Engineer (Open Source)

May 2024 – Present

OS Labs | Web Analytics Platform for React SPAs

- Engineered a dedicated Go ingestion module to process high-volume user events, implementing a goroutine worker pool for non-blocking database writes that reduced request latency by 20% during peak loads.
- Integrated Amazon Cognito, OAuth 2.0, and stateless JWTs into Express middleware, reducing stored authentication data by 24% and improving scalability by 20%.
- Published a TypeScript SDK on npm to capture normalized click coordinates, user-agent details, and referral data, simplifying telemetry integration and improving frontend diagnostics by 14%.
- Deployed Amazon EC2 and S3 infrastructure with Auto Scaling and a CloudWatch-scheduled Lambda function that refreshed Redis aggregates without persistent connections, improving uptime by 13%.
- Leveraged Amazon Bedrock to automate browser telemetry analysis, reducing manual development hours by 22% and accelerating the generation of actionable insights for frontend improvements.

InyaLand | Full-Stack Developer Intern

May 2023 – Aug. 2023

IT Consulting & Modernization | Clients: NMDC and Mandalay Degree College

- Applied React.js and Redux to build client-facing interfaces with predictable state management, enabling consistent user experiences across two higher-education platforms.
- Utilized Docker to containerize application services, standardizing development and deployment environments across the team.

PROJECTS

World Lens | AI-Integrated Country Insight Application

July 2026

- Developed a dedicated Python ETL pipeline to consume incoming gRPC streams, apply custom data sanitization, and integrate Vertex AI for AI-driven analysis before executing bulk database inserts.
- Architected a serverless ingestion tier on GCP Cloud Run, using end-to-end HTTP/2 networking to expose a low-latency gRPC stream that feeds aggregated World Bank API metrics to the ETL pipeline.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript (ES6+), Python, SQL, Java

Backend & APIs: Node.js, Express, Django, gRPC, REST APIs, GraphQL, Kafka

Data Platforms: PostgreSQL, Aurora, Azure Cosmos DB, Redis, ElastiCache, MongoDB, MySQL, Supabase

Cloud & Infrastructure: AWS (EC2, S3, Lambda, Cognito, Bedrock), Azure (AKS, Event Hubs, AI Foundry), Kubernetes, Terraform, Docker, Linux

Observability & Tools: Prometheus, Grafana, GitHub Actions, OpenAI, Claude Code, Jest, Postman

Frontend: React, Next.js, React Native, Redux, Jotai, D3.js, Chart.js, Material UI, HTML5/CSS

EDUCATION

Syracuse University – School of Information Studies

B.S. in Information Management | Concentration in Information Security
