Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, Go, Java, SQL

Frontend: React, Next.js, React Native, Redux, Jotai, D3.js, Chart.js, Material UI, HTML5/CSS

Backend: Node.js, Express, Django, GraphQL, gRPC, Kafka, REST APIs

Databases: PostgreSQL, AWS (Aurora, Elastic Cache), MongoDB, MySQL, Redis, Supabase, GCP CloudSQL

Cloud & DevOps: AWS (S3, EC2, Cognito, Bedrock, Lambda), GCP (Cloud Run, Vertex AI, Firebase, Identity Platform), Kubernetes

AI & Tooling: OpenAI SDK, Prometheus, Grafana, Jest, Stripe, Postman, Cursor, Claude Code, Zed

Experience

OSAnalytics | Software Engineer | Open-Source Web Analytics Platform for React SPA (*OS Labs*) *May 2024 - Present*

- Architected Node.js (Express.js) middleware integrating AWS Cognito, OAuth 2.0, and stateless JWTs to decouple authentication from application logic, reducing stored auth data by 24% and improving system scalability by 20%.
 - Leveraged AWS Bedrock AI to automate browser telemetry data analytics, resulting in a 22% reduction in manual development hours and faster generation of actionable insights for developers to improve front-end components.
 - Engineered a dedicated Golang ingestion module to process high-volume user events, implementing a Goroutine worker pool pattern for non-blocking database writes, which reduced request latency by 20% during peak loads.
 - Deployed a CloudWatch scheduled Lambda function to periodically recompute and refresh Redis telemetry aggregates, eliminating persistent open connections and ensuring cost-efficient cache reliability.
 - Developed and published a TS.js SDK on NPM to capture normalized click coordinates, user agent, and referral data, enabling developers to embed telemetry into client applications with minimal setup, improving frontend diagnostics by 14%.
 - Authored Jest unit tests for JWT validation and OAuth token logic, reducing regression risk across critical authentication flows and protected API boundaries by 18%.
 - Orchestrated deployment using EC2 and S3, leveraging Auto Scaling to maintain performance under variable loads, and employing AWS Cognito for seamless identity management, improving system scalability and uptime by 13%.
 - Integrated strict type-checking protocols using TypeScript to enhance security by creating immutable back-end objects passed through REST APIs to the front end, improving secure and reliable data fetching by 17%.
-

Projects

World Lens | AI-Integrated Country Insight Application

- Developed a dedicated Python ETL pipeline to consume incoming gRPC streams, applying custom data sanitization and integrating Vertex AI to generate AI-driven analytical insights before executing bulk database inserts.
- Architected a serverless data ingestion tier on GCP Cloud Run, leveraging end-to-end HTTP/2 networking to expose a low-latency gRPC stream that feeds aggregated World Bank API metrics to the ETL pipeline.

It's Cinema | AI-Powered Movie Recommendation Full Stack Application

- Integrated OpenAI via LangChain to automatically classify free-text admin movie reviews into sentiment-based rankings, replacing manual rating entry with an LLM-driven classification step in the update pipeline.
 - Used Next.js's App Router Server Components to fetch and server-render the movie catalog directly from the Go API on each request, delivering fully indexable, SEO-ready content leading to a 15% reduction in FE loading.
